```
1 function fe2dx nr alt
Discussion
5 % 'fe2dx nr alt.m' is similar to the code 'fe2dx nr.m', but uses an
6 % implicit approximation of the Robin boundary condition. The nodes and
7 % elements of the unstructured grid are loaded from external files
8 % 't triang.dat'and 'p coord.dat' respectively, as are the list of nodes on
9 % which Robin and Neumann b.c.'s are to be imposed (from 'bn1 nodes.dat'
10 % and 'bn2 nodes.dat' respectively).
11 %
12 % Boundary conditions:
13 % Gammal: Robin
14 % Gamma2: Neumann
15 %
16 % The Robin b.c.'s are of the form:
17 % partial u / partial n = k1 * u,
18 % partial v / partial n = k2 * v.
19 %
